Quick guide

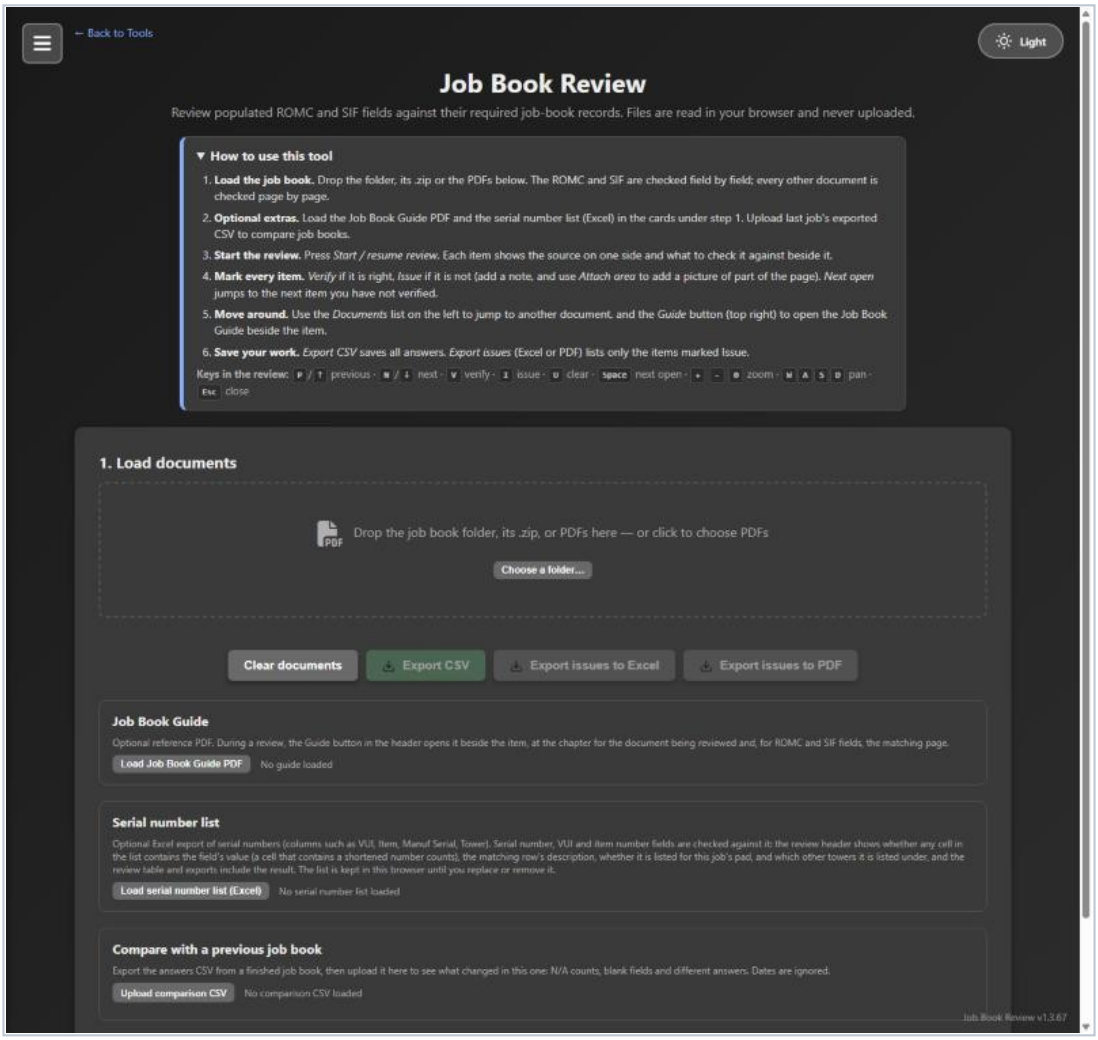

Job Book Review checks a job book one item at a time, so nothing is missed. Open it from the Bench home page. Your files are read in your browser and are **never uploaded**.

What it checks

- **ROMC and SIF** - every filled-in field is its own item, shown next to the document it must be checked against.
- **Every other document** - each page is reviewed as a whole.
- **Serial numbers, VUIs and item numbers** - checked against an Excel serial number list (optional).
- **Job Book Guide** - the guide PDF can open beside any item, at the right page (optional).
- **Your result** - mark each item Verified or Issue, add notes and pictures to issues, then export.

The six steps

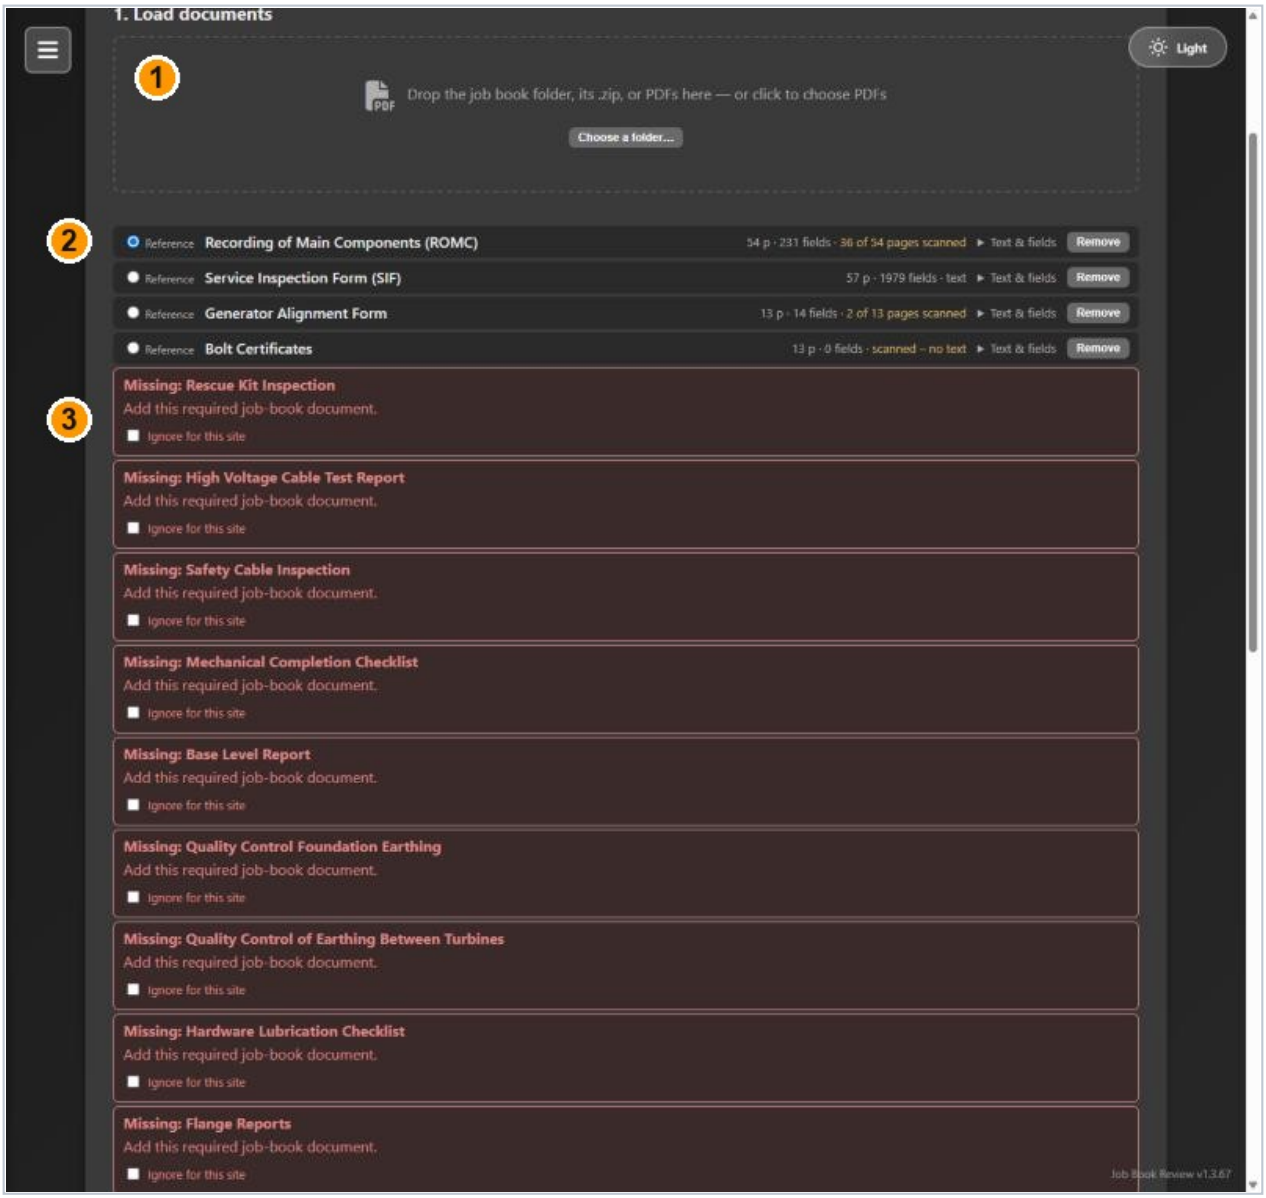

1. **Load** the job book (folder, .zip or PDFs).
2. **Add extras** if you have them: the Job Book Guide PDF, the serial number list, last job's CSV.
3. **Start** the review.
4. **Mark** every item Verified or Issue.
5. **Move around** with the Documents list, Next open and the Guide button.
6. **Save** with Export CSV, or export just the issues.

The same short guide is at the top of the tool itself.

Step 1 - Load the documents

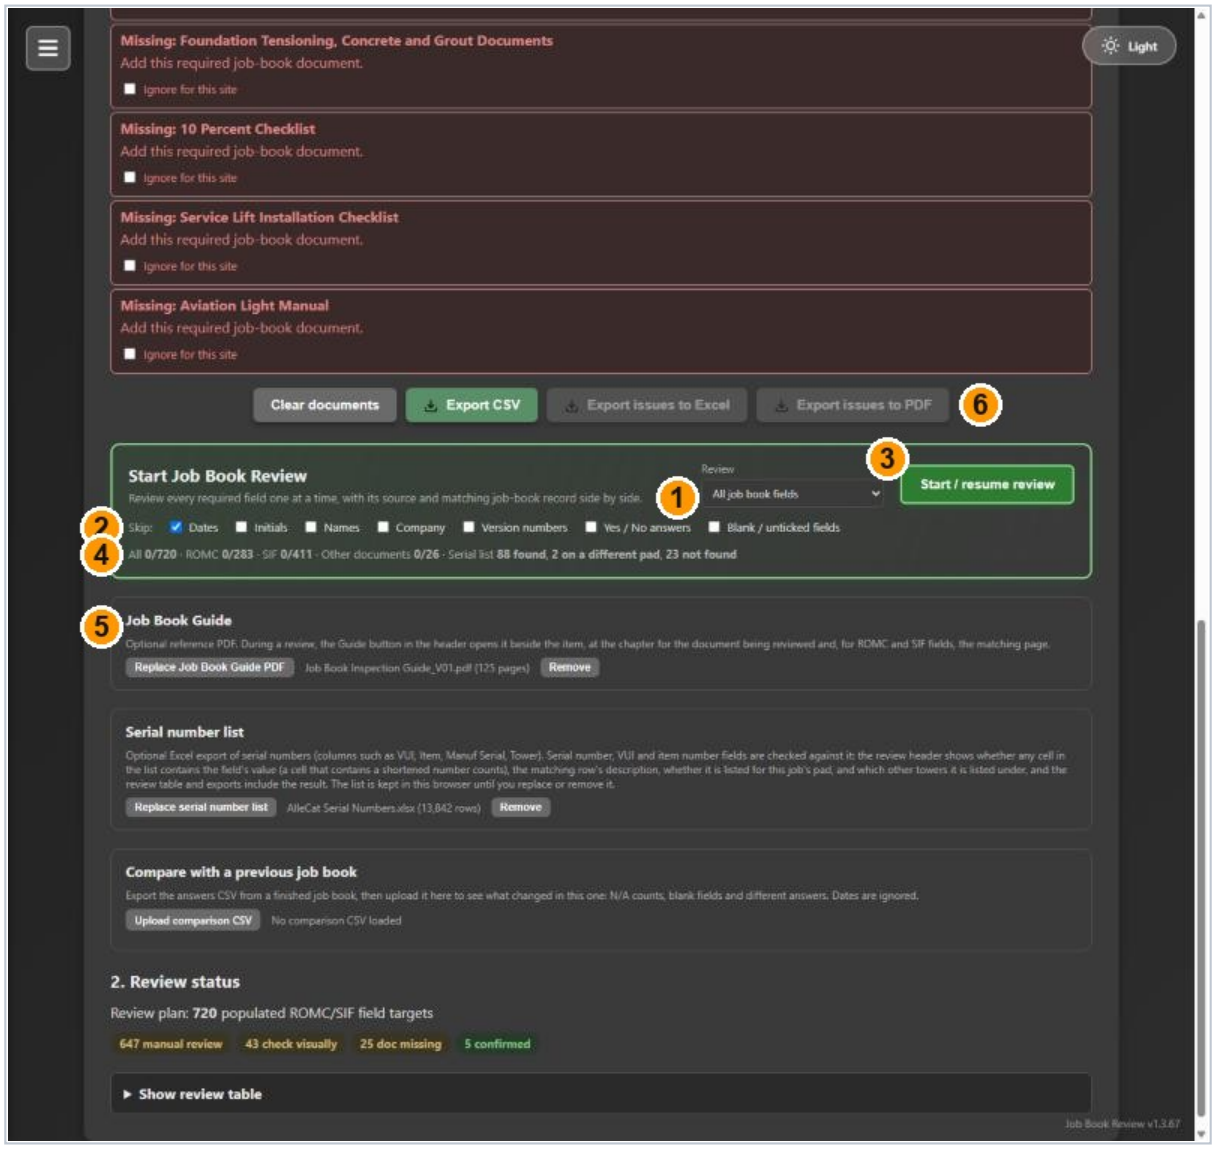

Drop the whole job book folder, its .zip, or the PDFs onto the box, or click it to choose files. Each document is read and added to the list.

1. **Drop box** - drop the folder, .zip or PDFs here. "Choose a folder" opens a folder picker.
2. **Loaded documents** - name, page count, number of form fields and whether pages are scanned. "Reference" marks the main document; it normally needs no change.
3. **Missing documents** - documents the tool expects but cannot find. If a site does not use one, tick **Ignore for this site** and it is greyed out instead of flagged.

Step 2 - Start the review

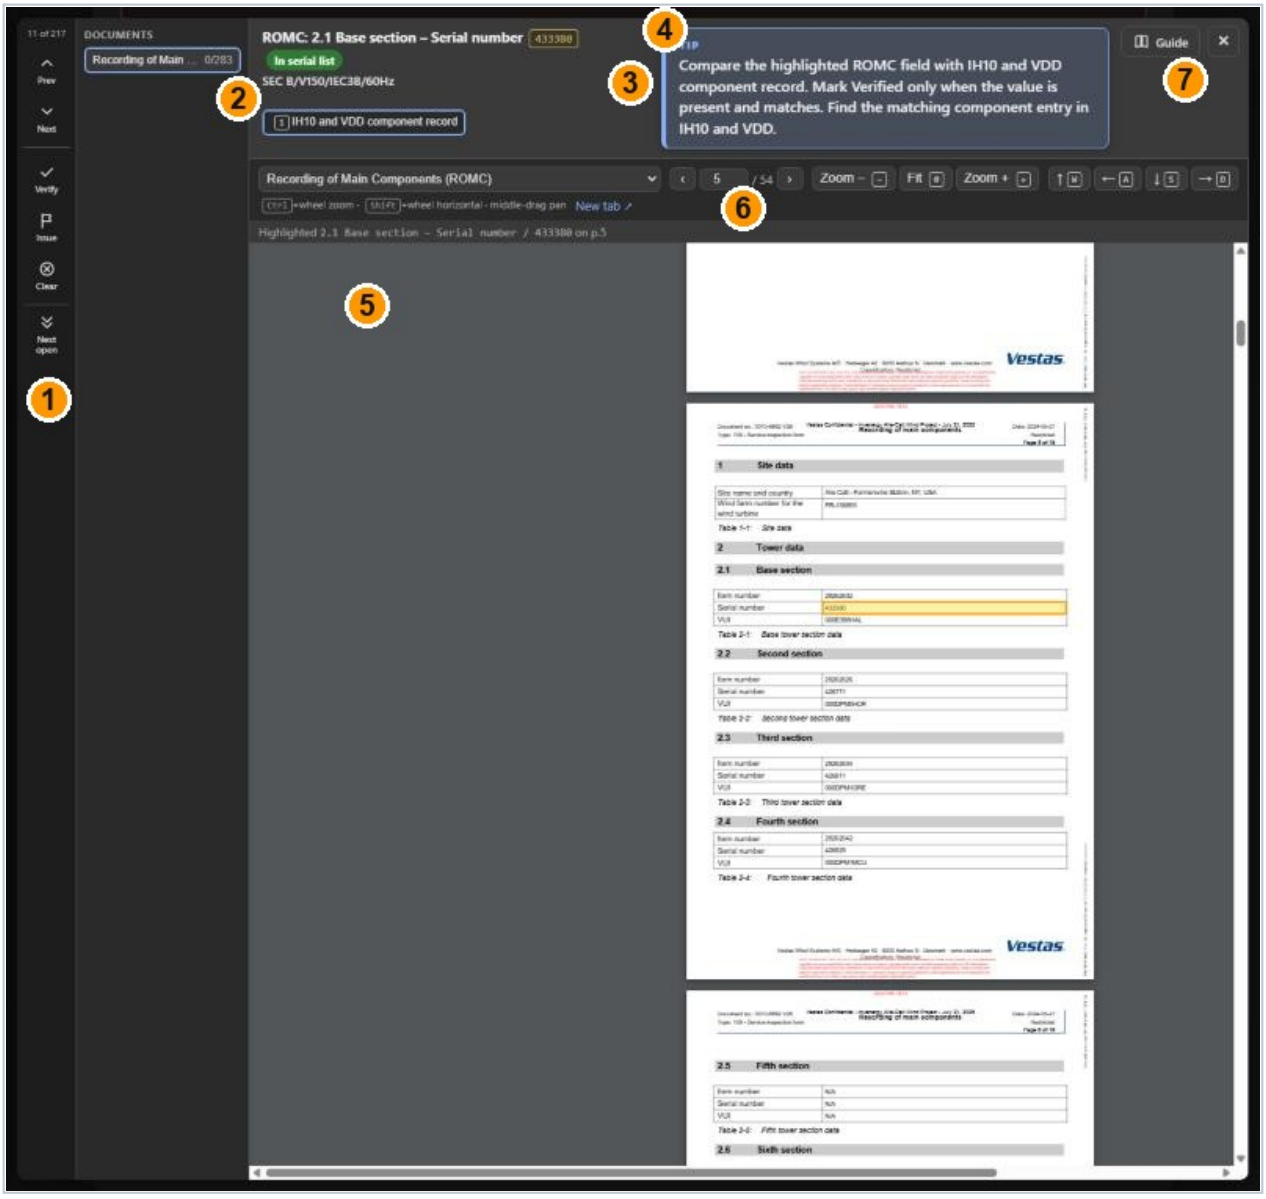

Once documents are loaded, the green card starts the review. Choose what to include, then press Start. The review opens where you stopped last time.

1. **Review scope** - all job book fields, ROMC only, SIF only, or the other documents.
2. **Skip** - leave out kinds of fields you do not want to review: dates (on by default), initials, names, company, version numbers, Yes/No answers, blank/unticked fields.
3. **Start / resume review** - opens the review at the first item you have not verified.
4. **Progress** - items verified so far, and the serial list totals once a list is loaded.
5. **Optional cards** - load the Job Book Guide PDF, the serial number list (Excel) or a previous job book CSV to compare with.
6. **Exports** - Export CSV saves all answers; the two issue exports list only items marked Issue.

Step 3 - The review screen

Each item shows what is being checked, with the source document on one side and the document it must match beside it.

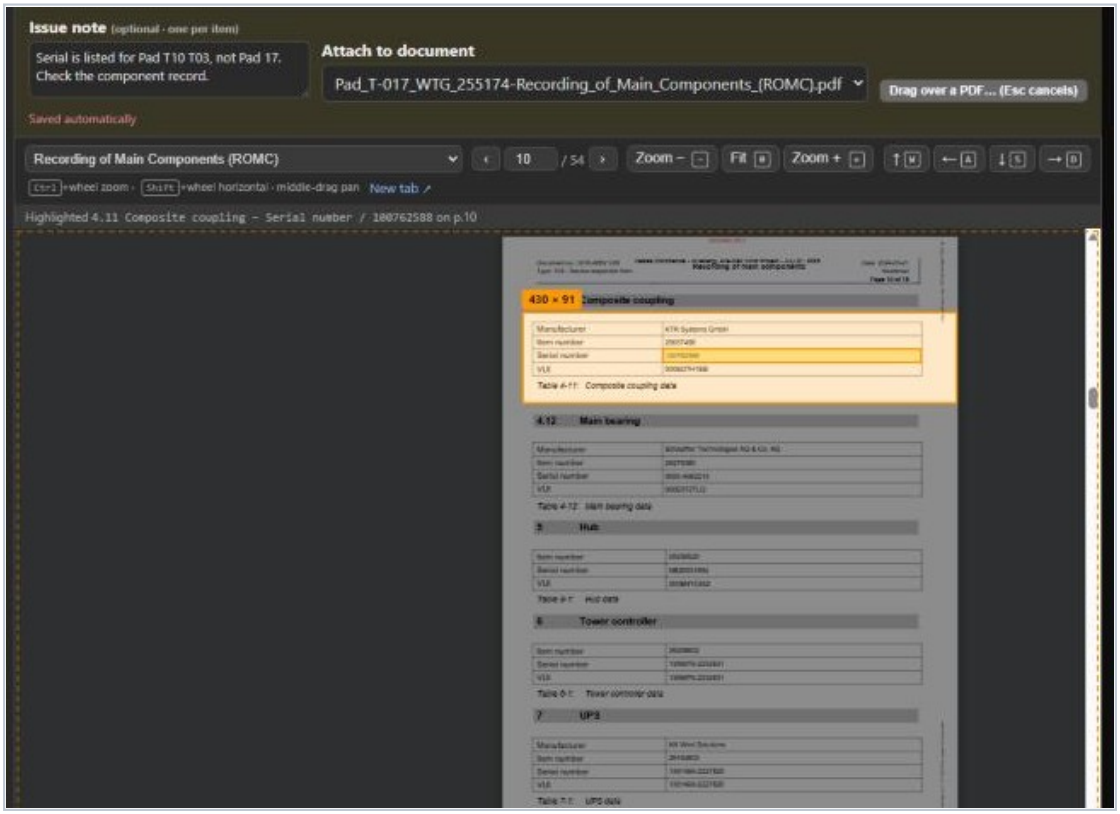

1. **Tool strip** - Prev / Next, Verify, Issue, Clear, and Next open (jumps to the next item you have not verified).
2. **Documents list** - every document with its progress; click one to jump to it.
3. **Header** - the field being checked, its value, and the serial list result (green, amber or red).
4. **Tip** - what to check for this item.
5. **Document panes** - the highlighted field in the source, and the document(s) it must match, side by side.
6. **Page controls** - page number, zoom and pan for each pane.
7. **Guide button and close** - open the Job Book Guide beside the item, or close the review (Esc).

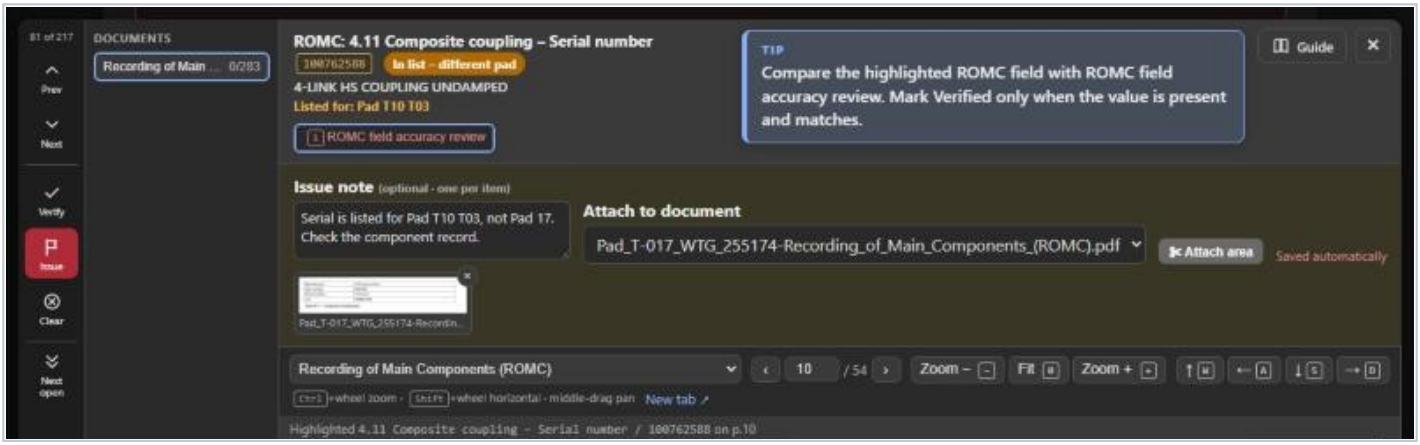

Marking items: Verify or Issue

Press **Verify** (V) when the item is right. Press **Issue** (I) when it is not: a note box opens and the item is marked straight away.

- Type a note. It **saves automatically**; there is one note per item and you can edit it at any time.
- **Attach area** adds a picture: click it, then drag over part of any page. The area is highlighted while you drag. Zoom and pan as you like first.
- Pictures appear under the note; click the x on a picture to remove it. They are printed next to the note in the issues PDF.
- **Clear** (U) removes the mark and its note. Pressing **Issue** again to un-mark an Issue keeps the note, in case you mark it again.

Dragging over a table row to attach it to the note. The orange box and size label show the area.

An Issue with a note and the attached picture. The tool strip shows Issue highlighted in red.

Serial list check

Load an Excel serial number list (card under step 1, or any time). Serial number, VUI, item number and batch fields in the ROMC and SIF are then checked against **every cell** of the list. A cell that contains a shortened number counts as a match. The result is shown next to the field value in the review header.

In serial list (green)

The value is in the list for this job's pad. The matching row's description is shown under the label.

In list - different pad (amber)

The value is in the list, but only for another pad, so the part may belong to a different tower. The towers are named.

Not in serial list (red)

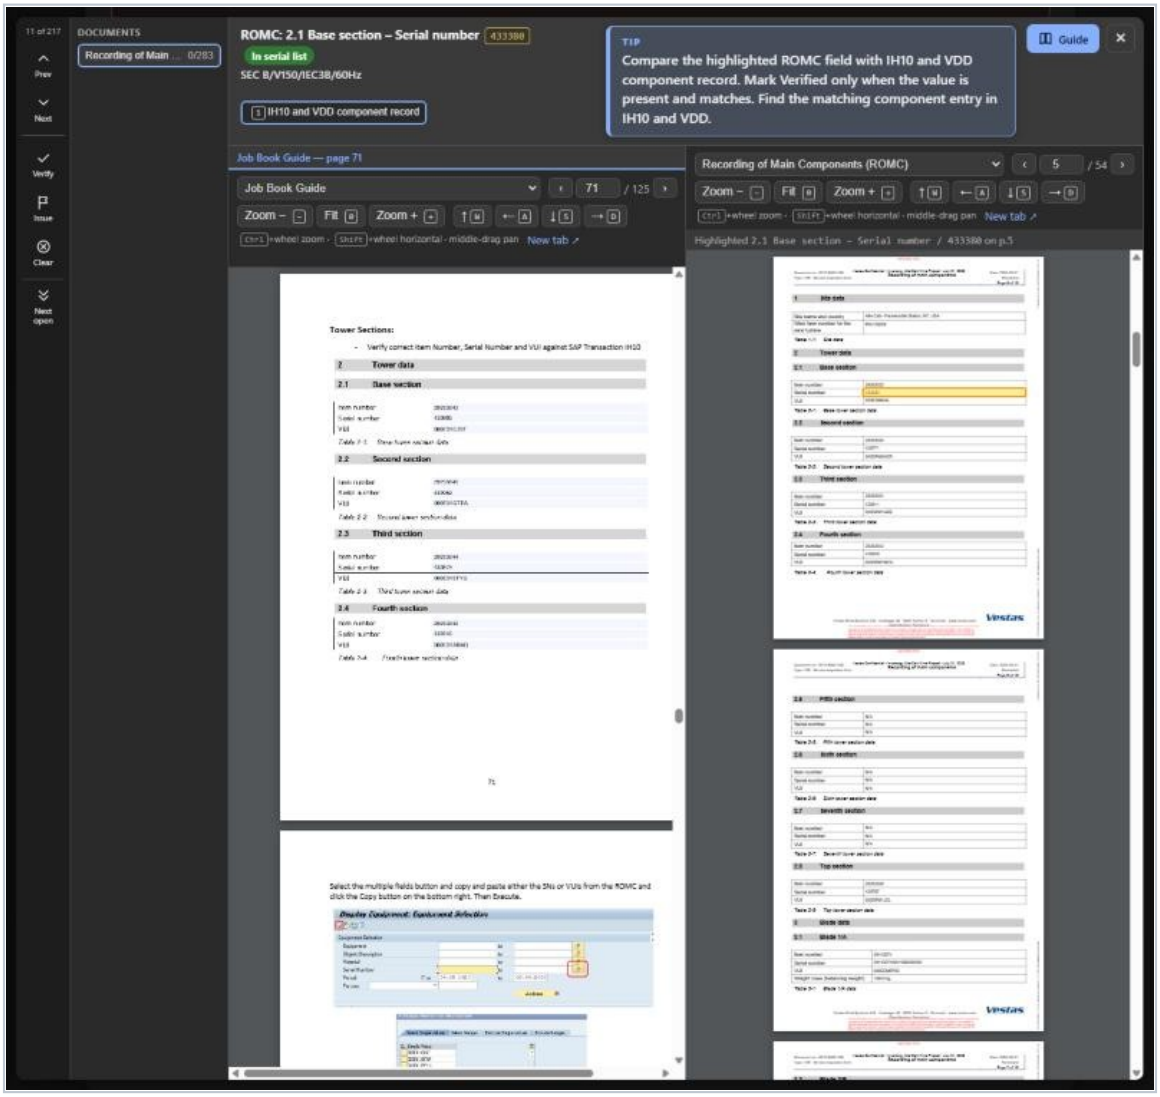

The value is not in the list at all.

- If a value is in the list for this pad **and** another tower, the pill stays green and a line names the other towers.
- Tool and instrument serials (torque wrench, pump, tension tool) are not checked, and neither are page reviews.
- The list stays in this browser until you replace or remove it. Results also appear in the review table and in the CSV export, but **not** in the issues PDF.

Job Book Guide beside the item

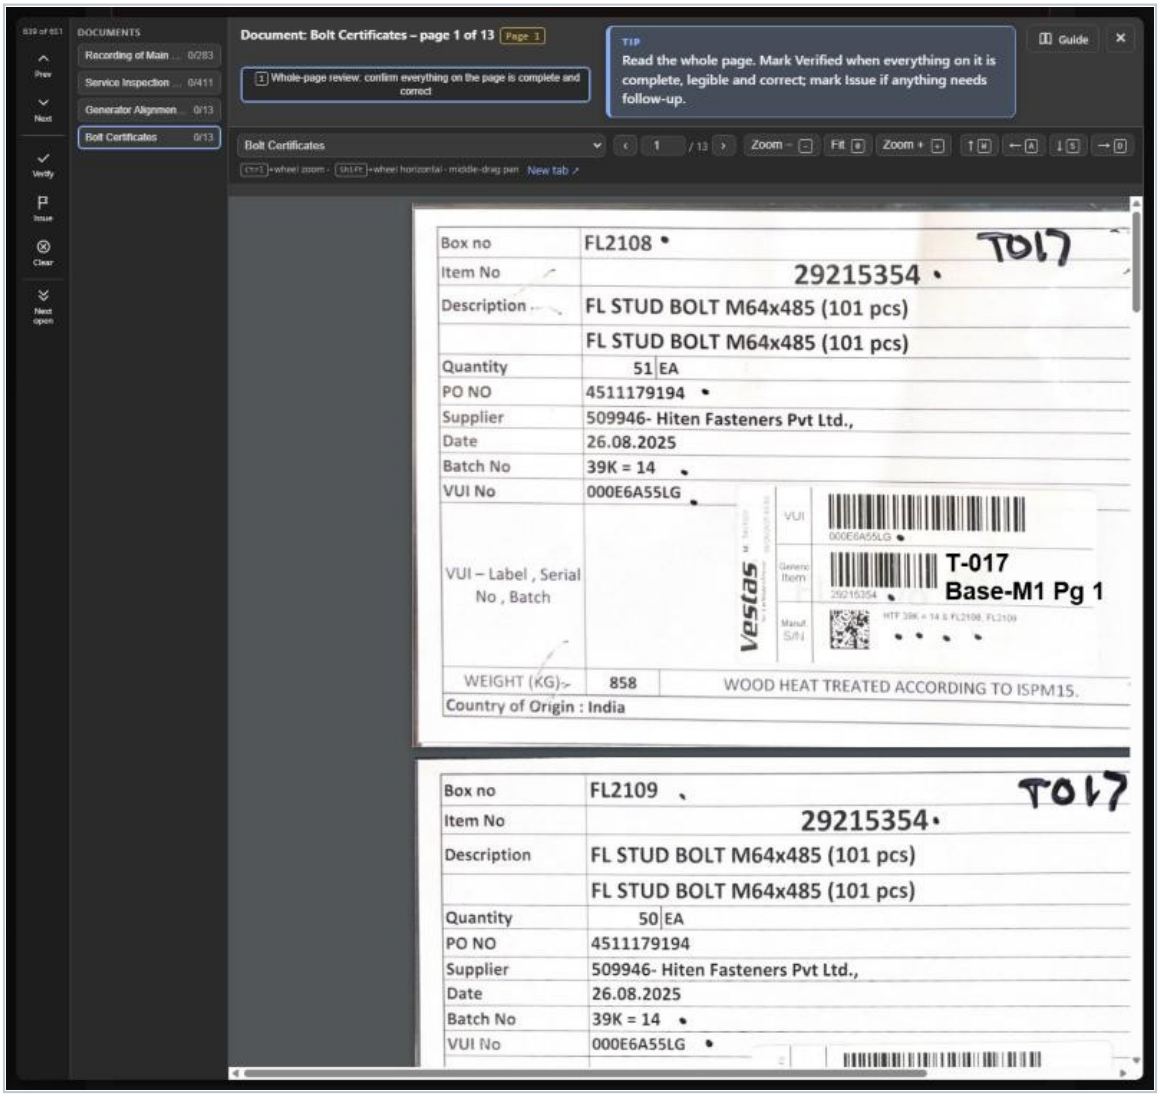

Load the Job Book Guide PDF once (the card under step 1, or the **Guide** button in the review header, which asks for the file the first time). The Guide button then opens it as a pane on the left.

- It opens at the guide chapter for the document you are reviewing.
- For ROMC items it opens the guide page for that section (for example Tower Sections, Blades, Nacelle, Rescue equipment). For SIF items it opens the guide page that best matches the section, or the page that follows the order of the form.
- The guide moves with you from item to item. Click **Guide** again to close it; the tool remembers whether you left it open.

Other documents: page review

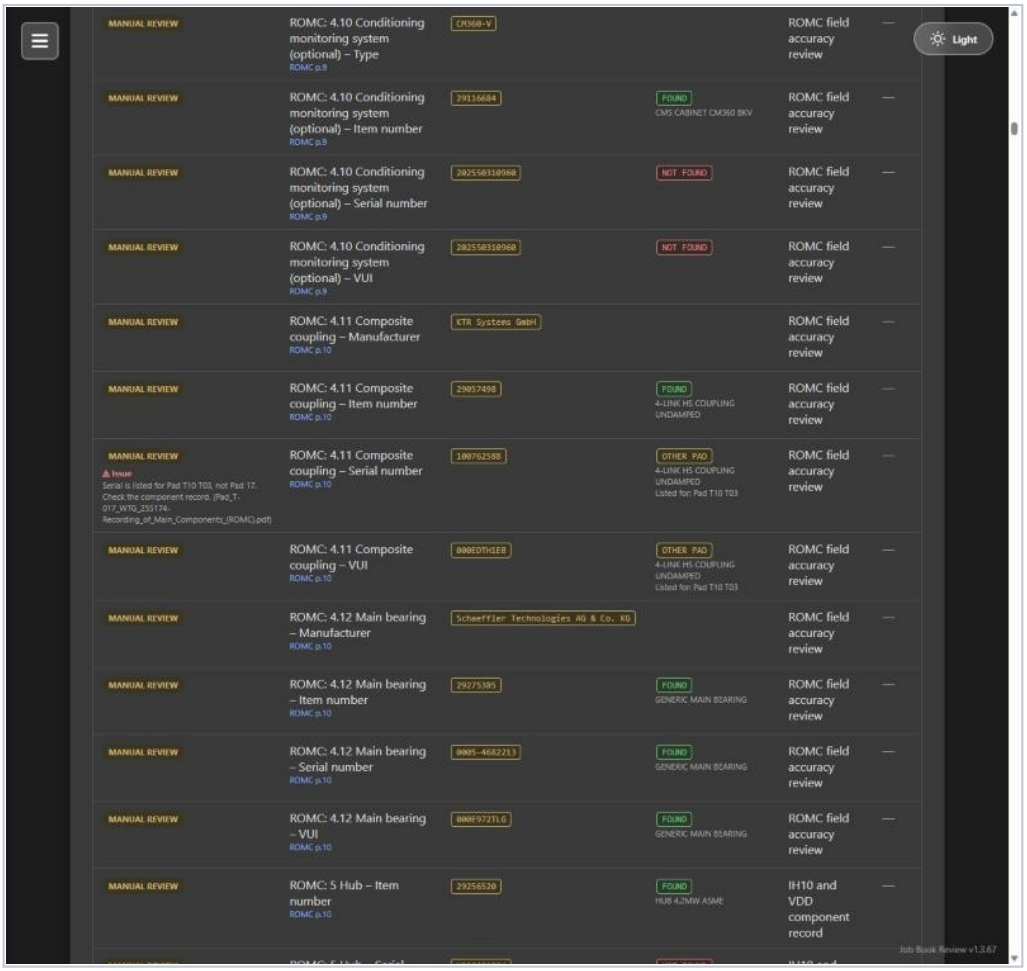

Documents other than the ROMC and SIF have no individual fields to check, so each **page** is one item. Read the whole page, then Verify it, or mark an Issue if anything needs follow-up.

- Use the **Documents** list on the left to jump to any document; each shows done / total.
- **Next open** skips everything you have already verified.
- Pages of the ROMC and SIF that have no filled-in field are reviewed the same way, so nothing is skipped.

Review table and exports

Open **Show review table** under step 2 to see every item with its status, review mark, notes and serial list result.

- **Export CSV** - every field with its answer, state (populated, N/A or blank), review result, and serial list result. Keep it to compare with the next job book.
- **Export issues to Excel / PDF** - only the items marked Issue, with their notes. The PDF also prints the pictures attached to each note.
- The issue exports switch on as soon as one item is marked Issue.

Compare with a previous job book

Export the CSV from a finished job book. On the next job, upload it in the "Compare with a previous job book" card. It stays in this browser until you replace or remove it.

Illustration only: here the comparison file is an edited copy of the same job book, so a few differences appear.

- The small table counts fields, populated, N/A and blank in each job book.
- The lists show fields that became blank, were filled in, changed to or from N/A, or have a different value. Dates are always ignored.
- **Click any change** to open it in the viewer; the arrows step through that list. This view is read-only.

Keyboard shortcuts and tips

In the review

P or Up arrow	Previous item
N or Down arrow	Next item
V	Verify
I	Issue (opens the note)
U	Clear the mark
Space	Next open item
1 2 3	Choose which required document the mark applies to
+ or =	Zoom in
-	Zoom out
0	Reset zoom
W A S D	Pan the page
Ctrl + mouse wheel	Zoom at the pointer
Shift + mouse wheel	Scroll sideways
Middle-button drag	Pan the page
Esc	Cancel an area selection, or close the review

Good to know

- **Nothing is uploaded.** Documents, marks, notes and pictures stay in the browser you are using, so use the same browser to carry on later.
- Your marks and review position are remembered. Closing the review and pressing Start / resume review picks up where you stopped.
- The Job Book Guide, the serial number list and the comparison CSV also stay until you replace or remove them.
- Some items need more than one check, for example a ROMC field that must match both a component record and another document. Use the numbered tabs (or 1, 2, 3) to choose which one you are marking.
- **Clear documents** removes the loaded PDFs from the tool. It does not change your exported files.
